Hi Dante,

Attached is the final draft version for your review and comments, and as needed a follow-up call this afternoon before we circulate it to CBI, and EPA, BLM, NDEP teams, including management.

I have made all the changes/revisions that you and I, and Jeff and I discussed, and I have removed my comments, so the version I send you is clean for CBI and others.

Where I still have comments I am just including those in the body of this email, rather than embedded in the slides.

Slide #5, the COC table:

1. As in the PP table, use units (ug/l) in all column headers. Then, CBI could remove the third note about units, as it is already stated.

2. An additional note for CBI to include for this table is an explanation of these data: was this one sampling event or the maximum or an average of several?; what was the sample date?

My review of the FS is that the data were collected in 2007, and again from 2009-2010, so it is probably the maximums observed during those events. Note should state that.

3. In the notes below the table it is stated that As, Cr, Ra, and U are the risk drivers. Make sure this is consistent with the PP, and my other comment is that radionuclides, Ra, U concentrations are not noted in the table. Should they be added, and maybe remove some of those that are not detected or do not exceed MCLs?

Slide #8:

4. This comment is not anything that CBI needs to change on the slide. Can CBI deduce where the \$1,780 capital expenditures derived? I cannot locate that, and I might get that question during the presentation, so I want to be prepared.

Slide #9 (note that I deleted this slide with the four figures, I just didn't think they helped the presentation, and might require unnecessary time explaining).

Slide #12 (after #9 deletion)

5. On Figure, remove striping in HLPs; make it like the poster, or Proposed Plan.

That's all the comments I had.

Let me know your thoughts and we can schedule a call this afternoon if you want.

Thanks,

Jeryl
